

Q/A app made with React and Redux

The purpose of the exercise is to see how comfortable you are with React, Redux and CSS. You are allowed to use other packages if necessary. Your goal is to make a QA web app with the following features:

- When landing on the page, a question and its answer should already be there.

Create a new question

Question

Here you can create new questions
and their answers.

Answer

- Optional:
 - Add a checkbox to add a delay of 5 seconds when adding a question.
 - Add a “delete single question” feature.
 - Add an “edit question” feature.
- The design is up to you: you do not have to follow the previous screenshots, they are mainly here to show and explain the features. You can be as imaginative as you want. Make sure to think about responsiveness.

Question

Answer

Create question

This is a front-end exercise, so no need to store the data in a database. The code must be easily runnable (npm start, readme) and be delivered through GitHub or a public Bitbucket repository.

Good luck :-)
